Parents Report

Measurement of Overall Improvement

Parents of Alpine Academy students take an internationally respected, scientifically validated survey when their daughter begins treatment; they take the same survey when the girl leaves. Comparison of these two time-points confirm statistically significant behavior change between intake and discharge.

61.
points

Results show an average 61 point drop in the overall Y-OQ score, which tracks general behavioral dysfunction (over 4 times the benchmark for reliable change).

Measurements of Other Clinical Improvement

There is also statistically significant improvement evident across several clinical domains. Results show:

20*point* decrease in depression/anxiety.

11*point* decrease in relationship problems.

12*point* decrease in attention problems.

8*point* decrease in aggression.

Girls Report

Alpine Academy girls also report statistically significant, reliable change from intake to discharge. Results show:

26*point* decrease in total scores of behavioral distress.

9*point* decrease in depression/anxiety.

**OVER
4X**

A drop of 61 points is over 4 TIMES what is clinically significant.

Awesome!

**FINAL
GRADE:**

A+
